

Your Personalized Journey

Generated for MSU Burgess Discovery Program on 4/26/2026

Your Responses

What problem do you want to solve? :

Study Paralysis, a lot of students have difficulty navigating their heavy workload. My goal for this company is to create a website that allows for guidance and structure for students to organize their thoughts and see quantitative results.

Who experiences the problem the most? :

College Students

How are your future customers solving this problem today? :

They are completely reliant on self made excel sheets, or their own independent methods. There is no website like the one I envision.

Why do you want to work on this? :

I've personally experienced the problem, I've seen others struggle with it, I'm passionate about the topic/industry, I think there is a big market opportunity

What are you hoping to learn first?:

How to turn my idea into a working prototype

What do you want to achieve during your time in the Discovery Program? :

Build my MVP, Keep learning, I'm not sure yet, Validate the problem

Describe your idea in one sentence.:

Give students a single place to understand how they spend time, how that connects to grades, and where to focus next. Instead of juggling separate notes and planners, the project is meant to centralize all of that into one polished interface.

Your Action Plan

Priority 1

Validate the Problem with Target Students

Before building anything, confirm that college students actually struggle with study organization and would use your solution. Conduct 10-15 interviews with students to understand their current pain points, existing tools, and willingness to try something new.

WHY THIS MATTERS FOR YOU:

- You've identified personal experience but need broader validation
- Understanding current solutions helps identify gaps in the market
- Early customer insights prevent building features nobody wants

Priority 2

Research Existing Study Management Tools

Analyze current solutions like Notion, Todoist, Google Calendar, and academic planning apps. Identify what works, what doesn't, and where your centralized approach could add unique value that students aren't getting elsewhere.

WHY THIS MATTERS FOR YOU:

- Helps refine your unique value proposition
- Prevents reinventing existing solutions
- Identifies competitive advantages and market positioning

Priority 3

Create a Simple Paper Prototype

Design a basic mockup of your interface on paper or using simple tools like Figma. Focus on the core workflow: how students input time/grades, view connections, and get actionable recommendations. Test this with 3-5 students before any coding.

WHY THIS MATTERS FOR YOU:

- Low-cost way to test core concept and user flow
- Helps clarify your vision before technical development
- Enables early feedback to guide MVP features

Next Steps

Interview 5 college students about study organization challenges

Focus on current tools, biggest pain points, and what an ideal solution would look like
Due: 5/10/2026

Research 3-5 existing study management apps

Document features, pricing, user reviews, and gaps your solution could fill
Due: 5/10/2026

Sketch core user interface wireframes

Focus on time tracking, grade correlation, and recommendation display
Due: 5/10/2026

Milestones

Problem Validation Complete

Confirmed student demand and refined problem definition based on interviews
Target: 5/26/2026

MVP Feature Set Defined

Clear scope for first version based on research and user feedback
Target: 5/26/2026

This personalized journey was generated based on your responses and is designed to help you achieve your goals.
